## **DETAILED ACTION**

## Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Claims 1, 4-11 and 14, 15 are rejected under 35 U.S.C. 103(a) as being unpatentable over Holden (U.S. Pat. # 2,480,023).

With regard to claim 1, Holden discloses a hair treatment applicator (figs. 1-3) comprising a handle (10 via member 12) having a longitudinal axis and being in an elongated form; a plurality of retaining structures or heads (28) connected to the handle, each of the plurality of retaining structures having a base (at 26) and a plurality of tines (30) and is capable of holding hair treatment, wherein the base facing in a direction substantially parallel to that of each other retaining structures and each of said plurality of tines extends substantially perpendicular from the base (see fig. 1); wherein each of the retaining structures being separated from each other by a separation volume (space between the two retaining structures). Holden fails to show the material of the handle being molded from one plastic material, however, it would have been obvious to one having an ordinary skill in the art at the time the invention was made to employ the material of the handle being molded from one plastic material, since it has been held to be within the general skill of a worker in the art to select a known material on the basis

Art Unit: 3732

of its suitability for the intended use as a matter of obvious design choice. In re Leshin, 125 USPQ 416. In regard to claims 4 and 15, Holden shows the plurality of tines in each retaining structures or heads being disposed on the base such that each tine being comprised within a first row of two or more tines (see fig. 2), however, Holden fails to show the tines aligned in a direction substantially parallel to the longitudinal axis of the handle and within a second row of two or more tines aligned in a direction substantially perpendicular to the longitudinal axis of the handle. It would have been an obvious matter of design choice to construct the tines aligned in a direction substantially parallel to the longitudinal axis of the handle and within a second row of two or more tines aligned in a direction substantially perpendicular to the longitudinal axis of the handle, since it has been held that rearranging location of parts of an invention involves only routine skill in the art. In re Japikse, 86 USPQ 70. In regard to claims 5, 6 and 7, Holden shows the hair applicator being a single piece (see fig. 1) and fails to show the handle being integrally molded with each of the retaining structures and the hair treatment applicator being injection molded from a polyethylene material. It would have been obvious to one having an ordinary skill in the art at the time the invention was made to construct the handle being integrally molded with each of the retaining structures and the hair treatment applicator being injection molded from a polyethylene material, since it has been held to be within the general skill of a worker in the art to select a known material on the basis of its suitability for the intended use as a matter of obvious design choice. In re Leshin, 125 USPQ 416. And also, since it has been held that forming in one piece an article which has formerly been formed in two pieces and put together

involves only routine skill in the art. In regard to claim 8, Holden fails to show the shape of each of the plurality of tines being frusto-conical. It would have been obvious to one having an ordinary skill in the art at the time the invention was made to construct the shape of each of the plurality of tines being frusto-conical, since such a modification would have involved a mere change in the shape of the known component. A change in shape is generally recognized as being within the level or ordinary skill in the art. In re-Rose, 105 USPQ 237 (CCPA 1955). In regard to claims 9-11, Fitzgerald fails to show each of the tines having a proximal end having diameter from about .125 inches to about .3125 inches and a distal end having a diameter from about .0625 inches to about .375 inches, the height of each tine being from about .25 inches to 1 inches and the separation volume having a width of at least about .25 inches. It would have been obvious to one having an ordinary skill in the art at the time the invention was made to construct each of the tines having a proximal end having diameter from about .125 inches to about .3125 inches and a distal end having a diameter from about .0625 inches to about .375 inches, the height of each tine being from about .25 inches to 1 inches and the separation volume having a width of at least about .25 inches, since such a modification would have involved a mere change in the size of the known component. A change in size is generally recognized as being within the level or ordinary skill in the art. In re Rose, 105 USPQ 237 (CCPA 1955). In regard to claim 14, Holden shows the plurality of retaining structures being connected to the handle in an arrangement which is bilaterally symmetrical across the longitudinal axis of the handle (see fig. 1).

Application/Control Number: 10/678,206

Art Unit: 3732

Claims 1 and 12, 13 are rejected under 35 U.S.C. 103(a) as being unpatentable over WO 00/69308.

With regard to claims 1 and 16, WO '308 discloses a hair treatment (translated abstract) and a hair treatment applicator (figs. 3 and 4) comprising a handle (1) having a longitudinal axis and being in an elongated form; a plurality of retaining structures or heads (at 5) connected to the handle, each of the plurality of retaining structures having a base (4) and a plurality of tines (5) and being configured for holding hair treatment, wherein the base facing in a direction substantially parallel to that of each other retaining structures and each of said plurality of tines extends substantially perpendicular from the base (see fig. 4); wherein each of the retaining structures being separated from each other by a separation volume (10) and wherein the hair treatment being contained in each of the plurality of retaining structures (Applicant is noted that the hair treatment being dispensed from the opening 13 and into the retaining structure) and is not contained in the separation volume. WO '308 fails to show the material of the handle being molded from one plastic material, however, it would have been obvious to one having an ordinary skill in the art at the time the invention was made to employ the material of the handle being molded from one plastic material, since it has been held to be within the general skill of a worker in the art to select a known material on the basis of its suitability for the intended use as a matter of obvious design choice. In re Leshin, 125 USPQ 416. In regard to claim 12, WO '308 discloses each of the plurality of retaining structures having at least one baffle (10) extending from the base. In regard to

Application/Control Number: 10/678,206 Page 6

Art Unit: 3732

claim 13, the baffle being substantially parallel to the longitudinal axis of the handle (see fig. 4).

## Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Robyn Doan whose telephone number is (571) 272-4711. The examiner can normally be reached on Mon-Fri 8:30-6:00.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Cris Rodriguez can be reached on (571) 272-4964. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free). If you would like assistance from a USPTO Customer Service Representative or access to the automated information system, call 800-786-9199 (IN USA OR CANADA) or 571-272-1000.
